

Satellite Air-time Billing System

SATbill enables communications providers to track entire service cycles, from customer order to service provision and invoice generation: Key benefits of SATbill include:

- ✦ Reduce air-time billing cycles
- ✦ Single-click billing
- ✦ Improve billing accuracy
- ✦ Reduce billing resources
- ✦ Ensure easy tariff management
- ✦ Improve profitability

Core elements of SATbill

- ✦ Handles time, data (MiB and KB) and event-based calls, including packet and 256-bit Inmarsat C data.
- ✦ Supports D91-style, CSV-based and customer-specific VSAT CDR formats.
- ✦ Services covered: Inmarsat BGAN, FBB, SBB, SPS, B, C, Fleet, M, mini-M, M4, Thuraya and Iridium (including Short Burst Data).
- ✦ May be configured to handle your own VSAT offerings.
- ✦ Full CDR searching and control.
- ✦ Contract (post-pay) and Advance Pay tariffs supported. Balance Summaries showing remaining credit are generated for Advance Pay agreements. Invoices are generated for contract agreements.
- ✦ Invoices may be generated at any level: Terminal/SIM, air-time agreement, installation and customer.
- ✦ Configurable invoice layouts, including the use of your logos.
- ✦ Multiple billing entities are supported, including the use of different logos for each branch office.
- ✦ Full support for installations including tracking of which terminal is on which installation.
- ✦ Handles all monthly or annual subscription and services activation charges, including part-period charges.
- ✦ Handles multiple add-on extra-cost services, such as fixed IP address costs, for monthly or annual charging.
- ✦ Handles complex value and volume-based bundles and allowances for all I4 services (BGAN, FBB, SPS) including SCAP.
- ✦ Handles rebates and discounting of all charges, including call charges.
- ✦ Provides alternate pricing options for 'Roaming' calls.
- ✦ Full pricing alerts for calls which are losing you money or where the margin is too low.
- ✦ Invoices and Balance Summaries may be produced in Euros, US dollars or UK Sterling.
- ✦ Billing output in PDF and Word formats.
- ✦ Billing Groups allow invoices to be generated for one or more services.
- ✦ Cost of sales reporting available in Excel format showing the margins you are making from each service, installation, branch office, provider etc.
- ✦ Interfaces are available to standard accounting systems.
- ✦ Integrated Equipment Rentals module handles complex tariffs and provides single-click rental invoicing.

There are three versions of SATbill (Desktop, Standard and Enterprise) aimed at small, medium and large Service Providers. Pricing is dependent on the number of active Terminals/SIMs being billed and the number of users required. The Desktop version of SATbill runs as a standalone application whereas the Standard and Enterprise versions both run Client/Server. The Enterprise version of SATbill includes the Multiple Billing Entities module that enables Service Providers to bill airtime for their branch offices. This module is also available as an option in the Standard version. A fully integrated Satellite Equipment Rentals Module that handles complex tariffs and provides Single-click rental invoicing is also available as an optional add-in module.

SATbill Core System	Desktop	Standard	Enterprise
System Usage			
Maximum Active Terminals/SIMs	150 300	300 600 900 1200	Unlimited
SATbill Modules
